Vercel's Routes Problem

Step 1. Add the following script into your `index.html` file.

```html
<script type="text/javascript">
    (function (l) {
      if (l.search[1] === "/") {
        var decoded = l.search
          .slice(1)
          .split("&")
          .map(function (s) {
            return s.replace(/~and~/g, "&");
          })
          .join("?");
        window.history.replaceState(
          null,
          null,
          l.pathname.slice(0, -1) + decoded + l.hash
        );
      }
    })(window.location);
</script>
```

Step 2. Create `vercel.json` file in the root folder.

Step 3. Add the following code into `vercel.json` .

```json
{
  "rewrites": [{ "source": "/(.*)", "destination": "/" }]
}
```

You are all done. Happy Coding! 😊
